

1. Sitemap Diagram – Food Delivery Website

A simple sitemap for a Zomato-style website could look like this:

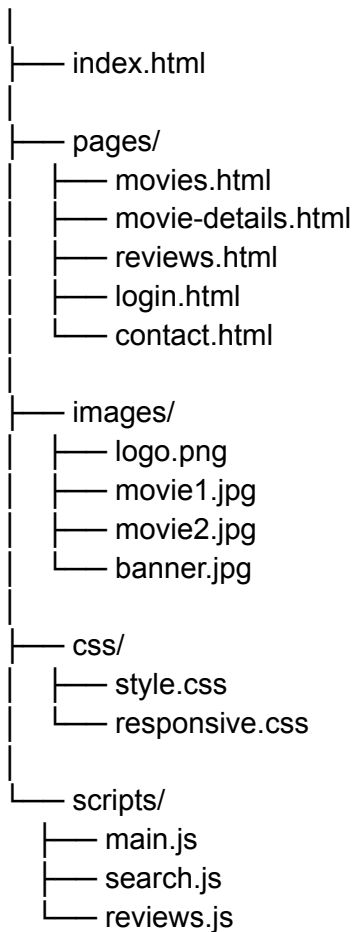

Flow: Home → Search → Restaurant Details → Cart → Order Confirmation → Orders.

The **Profile** section can be accessed directly from the Home page and contain account details, saved addresses, payment methods, and preferences.

2. Folder structure – Movie Review Website

A basic project could be organized as follows:

movie-review-website/

Purpose:

- `pages/` → Website pages.
 - `images/` → Movie posters, logos, and banners.
 - `css/` → Website styling.
 - `scripts/` → JavaScript functionality.
 - `index.html` → Main homepage.
-

3. Why clear website architecture matters for Flipkart-like e-commerce

Clear website architecture helps users **find products quickly** without getting confused. Logical categories and navigation make it easier to move from the homepage to product pages, cart, and checkout. It also reduces the number of clicks needed to complete a purchase. A well-organized structure improves usability and can make the website easier for search engines to understand and crawl.

4. Website structure – Spotify-style music app

If I designed a website version of **Spotify**, I would organize it into these main sections:

Section	Purpose
Home	Shows personalized playlists, recently played music, and recommended songs.
Search	Allows users to find songs, albums, artists, podcasts, and playlists.
Browse	Displays genres, new releases, charts, and popular music.
Your Library	Stores saved songs, albums, artists, and personal playlists.
Playlist Page	Lets users view, play, edit, and share playlists.
Artist Page	Displays an artist's songs, albums, popular tracks, and related artists.
Now Playing	Provides playback controls, queue, lyrics, and song information.
Profile/Account	Contains account settings, subscription information, and preferences.

Simple website navigation

Home

- Search
- Browse
- Your Library
 - Playlists
 - Liked Songs
 - Saved Albums
- Artist Pages
- Account / Settings
