

1. Digital Marketing Plan – Zomato

AI-based framework: Audience → Objective → Channels → AI Optimization → Measurement

- **Target audience:** College students and young professionals aged 18–35 who frequently order food online.
 - **Marketing objective:** Increase new-user registrations and first-time food orders.
 - **Main channels:** Instagram/Reels, YouTube, Google Search Ads, influencer marketing, email, and push notifications.
 - **Key message:** “Your favorite food, delivered fast—with exciting deals every day!”
 - **AI-powered tool:** **Google Analytics 4 with predictive insights** to identify high-value audiences and understand user behavior, then optimize campaigns toward users most likely to convert.
 - **KPIs:** App downloads, registrations, first orders, conversion rate, and cost per new customer.
-

2. Five creative product-launch campaign ideas for a food delivery app

Product/Feature: “Group Order” for college students

1. **#OrderTogether Challenge** – Students create a group order with friends and post their meal combinations on Instagram; the most creative group wins food vouchers.
 2. **Hostel Hunger Hour** – Offer special discounts during popular student meal times, such as 7–9 PM.
 3. **Influencer Food Battle** – Two college influencers create different group orders and ask followers to vote for their favorite.
 4. **Mystery Meal Drop** – Promote a limited-time mystery discount that users can reveal only after starting a group order.
 5. **Campus Ambassador Campaign** – Recruit student ambassadors to demonstrate the feature in their colleges and share unique referral codes.
-

3. Customer Journey Map – Booking a Movie on BookMyShow

Journey Stage	User Action	Touchpoint	Possible AI Marketing Intervention
1. Awareness	User hears about a new movie	Instagram/YouTube/Search	AI can show personalized movie advertisements based on the user's interests.
2. Discovery	User searches for a movie	BookMyShow website/app	AI can recommend movies based on previous bookings and browsing behavior.
3. Selection	User chooses movie, cinema, and showtime	Movie/showtime page	AI can suggest suitable showtimes or nearby cinemas based on preferences.
4. Payment	User selects seats and pays	Checkout page	AI can recommend relevant offers or payment discounts.
5. Post-booking	User receives confirmation	Email/push notification	AI can send personalized reminders and recommend similar upcoming movies.

Two important AI touchpoints

- **Personalized recommendations:** AI can analyze previous movie choices and recommend films the user is more likely to watch.
 - **Personalized offers:** AI can identify users likely to purchase and provide relevant discounts instead of sending the same offer to everyone.
-

4. Three uses of AI-driven analytics for a Spotify-style app

1. **Personalized recommendations:** Analyze listening history, favorite artists, genres, and skips to create personalized playlists and targeted promotional campaigns.
2. **Optimal notification timing:** Analyze when each user normally listens to music and send playlist or new-release notifications at times when they are most likely to engage.
3. **Churn prediction:** Identify users whose listening activity is declining and automatically target them with personalized playlists, new-release alerts, or special subscription offers.
