

1. Google Analytics – Top 3 traffic sources

Google Analytics' current GA4 interface uses **Reports** → **Acquisition** → **Traffic acquisition** to show where visitors come from. Google also provides a public demo account using Google Merchandise Store data.

I can't access a signed-in Analytics demo account from this chat, so I can't honestly claim these are the **actual past-7-day results**. For your assignment, open the demo account, set the date range to **Last 7 days**, and record the first three rows in the Traffic acquisition report.

Example format:

Rank	Traffic Source
1	Organic Search
2	Direct
3	Organic Social

Note: These are example entries, not verified current demo-account rankings.

2. Five ways users can reach Flipkart's homepage

1. **Organic Google Search** – A user searches for “Flipkart” or a product and clicks an unpaid search result.
 2. **Direct URL** – The user types flipkart.com directly into the browser or uses a bookmark.
 3. **Social Media Ads** – A user clicks a Flipkart advertisement on Instagram, Facebook, or another social platform.
 4. **Referral Links** – A user clicks a Flipkart link shared on another website, blog, or messaging platform.
 5. **Push Notifications** – A user receives a shopping offer notification and taps it, opening Flipkart.
-

3. Traffic-source spreadsheet

Traffic Source	Estimated Monthly Visitors	Example for a Food Delivery App
Google Search	1,500,000	User searches “food delivery near me” and finds the app
Instagram Ads	700,000	User clicks an Instagram food-offer advertisement
Influencer Posts	350,000	Food influencer shares an app discount link
Direct App Opens	2,000,000	Existing users directly open the food-delivery app
SMS Campaigns	200,000	User clicks a promotional SMS containing an order link

Note: These figures are realistic **estimates for a classroom exercise**, not actual Swiggy/Zomato traffic figures.

4. Ten creative ideas to increase traffic for an IPL fan site

1. **Live match score page** – Provide fast, mobile-friendly live scores to attract fans searching during matches.
2. **IPL prediction contests** – Let visitors predict match results and player performances for points or badges.
3. **Player statistics hub** – Create searchable pages for batting, bowling, and career statistics.
4. **Daily fantasy tips** – Publish useful pre-match player and team analysis.
5. **Instagram Reels** – Post short match facts, records, and memorable moments that link back to the website.
6. **WhatsApp/Telegram alerts** – Offer opt-in notifications for scores, wickets, and major match updates.
7. **SEO match previews** – Publish pages targeting searches such as “today's IPL match” and “IPL playing XI.”
8. **Influencer collaborations** – Work with cricket creators to discuss articles, predictions, and contests.
9. **Fan polls and quizzes** – Create interactive quizzes such as “Who will win today's match?”
10. **Email newsletter** – Send a daily IPL roundup containing scores, news, statistics, and links to the site.

Best 3 ideas for my notes

- **Live match score page:** Fans regularly search for quick scores, so real-time updates can bring repeat visitors.
- **IPL prediction contests:** Games and competitions encourage fans to visit frequently and share the site with friends.
- **WhatsApp/Telegram alerts:** Instant match notifications can bring users back to the website whenever something important happens.
