

1. App: Instagram — 3 ways it keeps users engaged

1. **Personalized recommendations** – Instagram recommends Reels, posts, and accounts based on what users watch, like, and follow.
2. **Notifications** – Likes, comments, messages, and new content notifications encourage users to return to the app.
3. **Stories and Reels** – Short, regularly updated content gives users a reason to open Instagram frequently and keep scrolling.

2. Instagram-style Story Poll

Question: 🎵 *What do you prefer listening to while studying?*

- **Option 1:** Lo-fi music
- **Option 2:** Bollywood songs

Vote collection plan:

I would post the poll using Instagram Stories and record the total votes shown for each option after 24 hours. I would display the results as **Lo-fi: 65% (650 votes)** and **Bollywood: 35% (350 votes)** using a simple bar chart or percentage graphic.

3. Sample push notification

🔔 **We missed you!**

Your favorite meals are waiting! 🍕🍔 Enjoy **₹100 OFF** on your next order today. Open the app and use code **WELCOME100** before the offer ends!

4. Flipkart product-page engagement features

1. Wishlist:

The wishlist lets users save products they are interested in and return to them later. This encourages users to browse and compare more products before making a purchase.

2. Ratings and Reviews:

Customer ratings and reviews give shoppers additional information about a product. Users may spend more time reading reviews and exploring related products before deciding what to buy.

5. Three creative engagement ideas for a Spotify-like app

1. **Music Mood Challenge:** Let users select their mood and generate a matching playlist, then encourage them to share it with friends.

2. **Collaborative Playlist Battles:** Friends could create competing playlists around a theme and vote on which playlist is better.
3. **Weekly Listening Rewards:** Give users badges or fun achievements for milestones such as discovering 20 new artists or listening to music every day for a week.
