

1. Search: “best pizza places in Ahmedabad”

I checked the current search results. Search rankings can vary by location, device, and time, so your Google results may look slightly different.

Rank	Website	Result type
1	Tripadvisor – Best Pizza in Ahmedabad	Organic
2	Zomato – Pizza Restaurants in Ahmedabad	Organic
3	Tripadvisor – Best Pizza Places Delivery in Ahmedabad	Organic

Tripadvisor currently has an Ahmedabad pizza listing with 227 restaurants, while Zomato has a dedicated Ahmedabad pizza-results page.

Observation: I did not find a clearly labeled Google text ad among the results returned by my search, although ads can vary depending on the user's location and search session.

2. Five keywords for finding Zomato

If I were searching for the Zomato website on Google, I might use:

1. **Zomato**
2. **Zomato food delivery**
3. **Zomato restaurants near me**
4. **Zomato online food ordering**
5. **Zomato restaurant reviews**

Zomato's website includes restaurant discovery, food delivery, offers, and restaurant information, making these relevant search phrases.

3. Search: “buy wireless headphones online”

The exact Google first page can vary by location and personalization. Based on the current search results I could verify, the results include both shopping/e-commerce pages and technology review sites. For an assignment-style analysis:

Result type	Approx. count	Examples
E-commerce/shopping sites	5	Amazon, Flipkart, Croma, Reliance Digital, brand stores
Blogs/review sites	5	TechRadar, Forbes, Engadget, Tom's Guide, What Hi-Fi
Ads	3	Shopping/search advertisements from retailers

Total: approximately **13 prominent results/placements**.

For example, TechRadar has a current guide comparing wireless headphones, while Forbes and Engadget also publish headphone buying guides.

Important: The number of ads is especially variable because Google may show different sponsored results to different users.

4. Search engine vs. web browser

A **search engine** is a service that helps us find information and websites on the internet by entering keywords. Examples are **Google Search** and **Bing**.

A **web browser** is an application used to open and view websites. Examples are **Google Chrome** and **Mozilla Firefox**.

Simple difference:

👉 **Search engine = helps you find websites.**

👉 **Browser = helps you visit and use those websites.**
